# UNIQUE Apache Tomcat Protector

## AntiVirus Security Gateway for Apache Tomcat

UNIQUE
Apache Tomcat Protector

**UNIQUE Apache Tomcat Protector checks uploading data for malicious content.**

### Areas of application

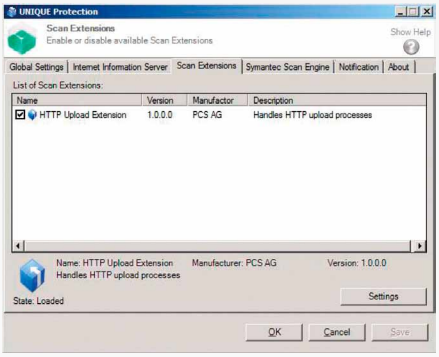
- Networks in enterprises
- Intrusion protection to sensitive database management and archiving systems
- Special software solutions in which an unknown upload of files and documents takes place from the outside into a sensitive data environment

### System requirements

Operating System:
MS Windows Server 2003 / 2003 R2 x86 / x64,
MS Windows Server 2008 x86 / x64,
MS Windows Server 2008 R2
or MS Windows Server 2012
Software:
Apache Tomcat 6.0 / 7.0
Symantec Scan Engine 5.1 or higher
RAM:
1 GB
60 MB of free disk space to install
Additional memory for logfiles

## Security solution for Apache Tomcat

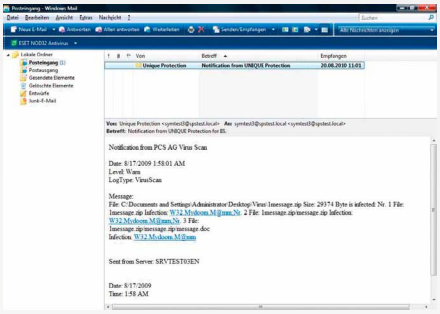
**You are annoyed about the constant growing virus threat?**
Therefore we developed UNIQUE Apache Tomcat Protector – an AntiVirus Security Gateway for Apache Tomcat. Via the new Symantec AntiVirus Scan Engine 5.x (system requirement) the content will now be checked and filtered during the upload. You are able to use multiple scan engines in cycle mode or priority mode.



*Configuration of UNIQUE Apache Tomcat Protector*

You can define which websites should be protected or should be left unprotected - there is no limitation for the quantity of protected websites.

If there is a virus found, you can create a redirect by yourself or use a template to inform you (administrator) and the user about this virus found.



*Notification via email about founds of viruses*

The handling of the UNIQUE Apache Tomcat Protector is individual, fast and securely configured.

### Advantages

- Redundant use of multiple scan engines
- Setup of an email notification system
- Individual configuration of protection
- Support for 32bit as well as 64bit environments
- Support for Apache Tomcat 6.0 and 7.0
