

# **UNIQUE Business for SaaS**

Software as a Service Access Platform

Complete your SaaS program with our newly developed SaaS provider access and application platform.

### Target groups

- Hoster and service provider who offer private cloud environments to their customers
- Web marketplace vendors who want to add standard client-server software to their product portfolio
- All customers who think that other common solutions are too expensive (our product costs only € 2,50 per user per month)

### **Fields of application**

SaaS Access Platform, Support in Microsoft SPLA License Reporting

#### **Technical details**

Server 1 (SaaS Access Server and Remote Desktop Gateway):

- Win Server 2008 / 2008 R2 / 2012 / 2012 R2
- Microsoft.NET Framework 2.0
- Internet Information Server (IIS)
- SSL certificate
- SQL Server 2008 / 2012 Express

Server 2 (Terminal Server/Remote Desktop) Services):

 Win Server 2003 / 2008 / 2008 R2 / 2012 / 2012 R2 – with adequate licensing

On the client's side all that is needed is an operating system (Win XP SP3 or higher) and your software has to be able to operate on a terminal server.

## Fast and secure SaaS access and application platform

Based on the Microsoft RDP 8.0 technology, Microsoft Terminal Server Gateway and the SQL database, our platform offers you individual applications without requiring a Windows desktop.

Selection of the application: The cloud customer receives only the subscribed programs

The system can be used on either server farms or stand-alone servers. It includes a load balancing technology, so fast traffic is guaranteed. With its central user administration and management functions you get automatically generated analyses and it is possible to activate scheduled and timecontrolled access options for the users. You can create new users – real or virtual ones. Real users are clients of your SaaS program. Virtual users are for short-term or demonstration purposes. Another special function is to support your users online (the admin can take over the session). The traffic via port 443 is fast and secure, so no modifications of your or your clients' firewall are necessary. Local resources (like printer or storage) can be integrated in the system.

### **Features and Benefits**

- Access platform for Microsoft Terminal Server (Remote Desktop Services)
- Cloud enabling for non
  Web browser-based software
- Support for MS SPLA license reporting
- 3-fold access technology: Remote Desk, Remote App and Remote Web
- License model per user / per month
- SaaSification of not-capable Web browser software to access Microsoft
   Terminal Server via any web browser (HTML5)
- Efficient integration of non-cloud software in Web marketplaces / stores

# **UNIQUE Business for SaaS**

Software as a Service Access Platform

## No client needed: Remote Desktop goes web

A new feature: "UNIQUE Business for SaaS" is equipped now with access via Web browser and provides a user-friendly web interface with much more comfort and clarity.

## Cloud enabling: "SaaSification" of non cloudenabled software – here's how it works

With "UNIQUE Business for SaaS", applications previously only available as client software with local software installation and licensing, are now made accessible remotely via the internet. "UNIQUE Business for SaaS" does not rely on the Virtual Private Network (VPN) technology, the conventional solution to the problem, associated with high installation costs, time-consuming administration and up to 50% loss of performance.

## **SaaS Communication**

"UNIQUE Business for SaaS" provides a remote access technology that allows users a direct, HTTPS-encrypted connection to a terminal server-based data center. This is achieved by accessing previously non-cloud-ready software applications on one or more terminal servers in a data center. Clients can now have access to desired software via "UNIQUE Business for SaaS" from anywhere in the world (requirement: connection to the internet).

## Test the ways of access

The trial version can be found under **www.pcs-ag.de/en/products/unique-business-for-saas** and client access can be tested under **www.pcs-ag.de/en/contact/online-demo-registration.**
